

## NOME TEAM MENTORING PROGRAM GRADUATION

Three years ago, MedTrace was accepted into the #NOME life-science mentoring program with an amazing team of legendary mentors.

Yesterday, we held our graduation session which timing-wise coincided with the installation of our first fully functional prototype in Aarhus University Hospital.

The NOME program has been instrumental in shaping the development of our company and a strong sparring partner for the management team.

We are grateful for being part of this exclusive program and for having received such valuable feedback from our mentor team.

We are even more happy to learn that our mentors have accepted our invitation to keep in contact and continue to meet up on regular basis.

Special thanks to our mentors Kirsten Drejer, Niels Erik Holm and Carl Borrebäck as well as the NOME team of Christine Ritter and Valentine Lübbe.
